AR With Layar Creator

Fast & Easy Augmented Reality Creation

03/12/2013

Augmented Reality (AR) can seem like magic but there are a growing number of creation tools that make it easy and fun for everyone to get started making their own. Layar Creator is a simple drag-and-drop interface available online. Here's how to get started:

① **Layar Creator**

Sign up and sign in at **Layar Creator** at http://layar.com/creator

② **+ New Campaign**

Create a new campaign. The image you upload is your "target" image - this is what you will point your camera at to see the Augmented Reality. The image should have a good amount of detail. Choose carefully - you can delete but not edit this target. Layar will check your image to make sure it will work well.

③ Build the AR content.

CLICK ON BUTTONS TO EDIT OR DELETE

DRAG & DROP BUTTONS ONTO TARGET IMAGE

Note: There is a fee for removing ads from Layar pages but you can apply to have this waived for educational projects.
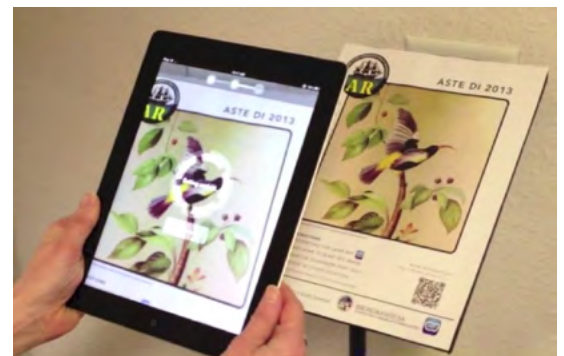

WHAT YOU WILL NEED

- camera enabled mobile device
- Layar App installed on your mobile device http://layar.com/download
- digital image (jpg or png)
- web browser
- an account at http://layar.com **Sign Up!**
- content for AR layer: links, video, images, social media, etc.

④ **Save Page**

⑤ Open the Layar App on your mobile device, hold the camera over a printed version of your target image.
